

All Fossil Fuels Are Not Created Equal!

Natural and Propane Gas are **clean, abundant, economical, and come from North America.**

That's why using **Real-Fyre® Gas Logs** makes so much sense!!

❖ Natural & Propane Gas are Clean & Environmentally Friendly

- ✓ Fueling a fireplace with gas, instead of wood, significantly reduces particulate matter released into the atmosphere.
- ✓ Carbon monoxide, VOCs, and other air toxins are reduced by 99+% by burning gas logs in place of wood.
- ✓ Because they burn so clean, Air Quality Districts are **paying** people to switch to gas logs from burning wood in their fireplaces.

❖ Natural and Propane Gas are Abundant

- ✓ Thanks to new technologies, enormous gas resources have recently been discovered in North America.
- ✓ Enough natural gas has been discovered to meet demand for more than 100 years, with additional supplies found each year.
- ✓ Natural and propane gas are reliable.
- ✓ The U.S. currently has more than one million miles of pipeline to conveniently deliver natural gas to your home.

❖ Natural & Propane Gas are More Economical than Wood

- ✓ Surveys conducted by the Robert H. Peterson Company in 1996 and 2005 showed average savings of between **41%** and **60%** when Real-Fyre Gas Logs were burned instead of wood.
- ✓ With gas prices down so much in the last year, burning a Real-Fyre® natural gas log set in 2009, costs **67%** less than burning wood.

❖ Natural Gas comes from North America

- ✓ Unlike gasoline and oil, for which we are increasingly dependent on foreign supply, **97.9% of natural gas comes from North America.**

Real-Fyre Gas Logs make sense – they're economical, environmentally friendly, clean, and use a fuel that's abundant here in the U.S.

... for all the right reasons!
